

# JOHAN KHANYE

## DATA SCIENTIST | WEB DEVELOPER

### ABOUT

Sometimes referred to as JoJo, I'm a young and passionate data scientist from Orange Farm currently enrolled at the Umuzi Academy as a Data Scientist recruit, with curiosity as huge as a mountain, I enjoy learning and socializing. after matriculating in 2017 I was indecisive about the career path I wanted to follow, that's when I came into closer contact to the career path of my Dreams which is Data Sciences, I've always loved statistics and I've always been curious about how data works in the real world, so I enrolled for Data sciences at Umuzi and Now I'm so in love with it.

I'm a non-socially Data scientist meaning socializing and hanging out with people

### SKILLS & EXPERTISE

#### LANGUAGES & ENVIRONMENTS.

- Python
- Linux & bash scripting.
- MySQL.
- HTML, CSS, Javascript

#### STATISTICAL STUDIES

- Summarizing data
- Analysing data.
- Displaying and comparing data, Data modeling, linear regression

- Git
- Google Analytics
- Trello
- Slack
- Raspberry pi

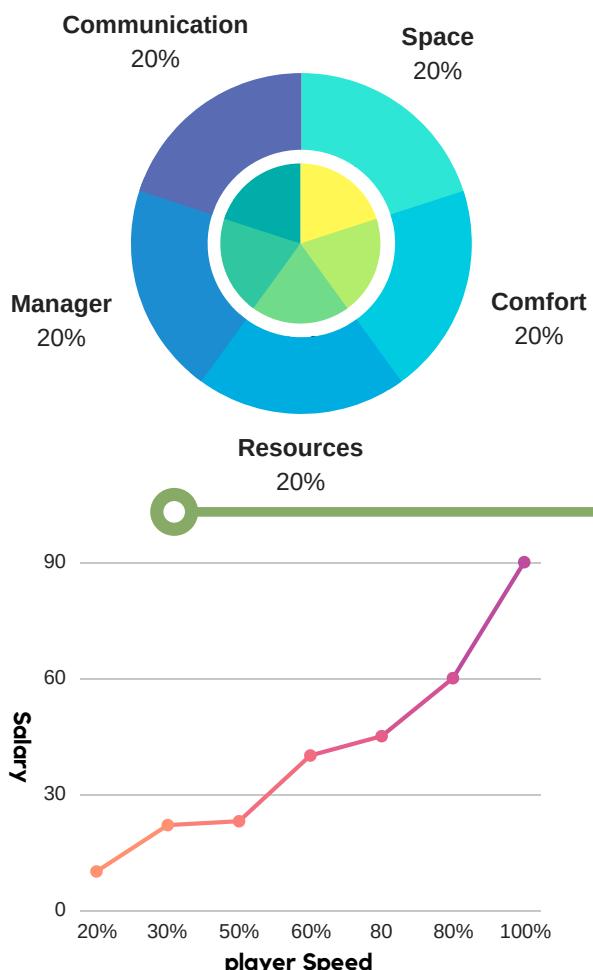

#### DATA ENGINEERING & DATABASE MANAGEMENT

- Data extraction from APIs.
- Data cleaning and transformation.
- missing value imputation.
- merging and pivoting.

"I am young passionate Creative data Scientist" – Jojo

# PROJECTS

## UMUZI DATA ANALYTICS DASHBOARD.

This project's aim was to help the Umuzi Academy make better business decisions, and to help the company make the recruitment boot camp more comfortable for boot campers by creating a Dashboard that will visualize data that has been collected from previous boot campers, and trying to make better decisions based on the stats.

**Status: Ongoing**

## FIFA 18 SALARY REGRESSION.

The main objective of this Project is to understand the analytics that are involved in the valuation of the FIFA 2018 players and how their salary is determined, we used player attributes such as speed, strength and Player acceleration to be our independent variable. On the Projects completion we will be able to predict a player's worth based on their personal attributes.

**Status: Ongoing**

## RASPBERRY POWERED SMART-MIRROR

Mirror mirror on the wall who's the most awesome of them all?! With this project, we created a Python-Raspberry pi powered smart mirror, that showed the forecast for the rest of the day, showed Top stories, the user's top ten upcoming events and the mirror.

**Status: Done**

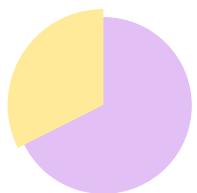

"I'm a curiosity driven young data scientist" - Jojo

# CAREER HIGHLIGHTS
